This has to do with the recommendation system. This bug I have noticed more and more so over time.

The bot keep giving the MVP recommonedation to the wrong person. It is giving that rec to the player the MVP in score. I've seen it happen game after game. It keeps giving it to the second highest scorer in the game. I am guessing this is not intentional and should be fixed. This has primarly occured on eoesvr01 but not limited to there as I have encountered this error on other servers running BRenBot.
