Hello.

I started hosting my Renegade server at ironrocket.com

After paying my initial bill, they gave me login details.

They said login via ssl with such and such details

I got the ssl part, and I even configured the configuration file. (such as Game Name, Map rotation, team rotate)

I believe I configured everything. server.ini is pointing to WOL. my username and password is entered and a serial starting with 0669 and my own serial have both been tried.

The problem I am encountering is that first of all, my server is not even showing its face on the Renegade server list. Secondly, it hit me that there was no way to admin the server (such as add moderators or boot unwanted people)

I need to first get my server ON the Server Screen, Could anyone possibly help me. If you could post a solution to this, it would be so much help to me.

Thank you for your time and support.

- exterwin

You said in your PM that this was a linux box, so I moved it here.

Currently you cannot use the LFDS to host a server on WOL, you must host it on GSA. Blazer has been working on getting the LFDS to work on WOL for a while, I'm sure what his progress has been lately.

Also, simply using a serial that starts with "0669" will not work online anymore. It will work to install the FDS, but you must use a valid client or server serial to log into WOL with an FDS. I'm going to assume that doesn't apply to your server since you need to host it on GSA for the time being anyway.

For moderation you'll need to install a client like BRenBot.

Thank you so much for your reply.
Sorry I posted in the wrong section.

Is there any way I can contact Blazer?

I would like to be notified as soon as possible if he can link linux with WOL.

Maybe he even finished... me dreaming.

Please ask for me. I would really like a renegade server up and running. Thanks for your support
