Hello Renguard peeps,

My renguard downloaded yesterday a quick patch - I did not pay attention - the result was/is an error code 0000005 and no game play at all - any ideas for me to get back to playing with renguard rather than game2.exe?

Vista Ultimate 32 - SLI nVidia 7800GT and two gig ram with AMD 4400 - if this helps at all?

Keep up the good work chums.

Regards,

raf

Most likely caused by you not running it as admin, cause 00000005 is
ERROR_ACCESS_DENIED.

You are right - this fixed it - begs the question as to how a little update downlaod can screw a system that worked perfectly well though - having said that I am beginning to realise that running almost anything as administrator is probably a good think for Vista

ty for the prompt reply Ghost - I appreciate it

right back to online renguarded gaming for me then

Careful, the idea of "Admin mode" was to prevent nasty little viruses doing lots of damage,

running most of your programs in Admin Mode might lead to virii having an easier time on your system, just a point.
