You could resize chars in LE  
Have a look at what i did  
here

Those bones were resized in RenX/3dsmax Ferk. He probably wants to know how to resize tiles or vehicles.

EDIT: Spider-man-bone

You may just have to import the harvester w3d file, re-material it, resize it and then finally export the model again.

What you have to do is this -> Unlink everything from the Origin bone (the rest of the links can be kept intact.)

Then resize the hummer. (worldbox chassis everything except the origin)

After you have resized it re-link everything to the origin bone. And then you should be done ^^

sry i don't really know boning and don't have time right now working on something else so can u please do it for me

---

resize it to the dimensions of a remote control toy car please.  
i ttached the original humvee gmax file
