Hi all, I recently installed RenGuard as I wanted to go on a RenGuard protected server (stupid of me yes I know). I tried starting up Renegade by double clicking on Desktop icon (like I usually do) and discovered this was not working. I then used the "Run as Administrator" option and the mouse icon then turned into the sign to show it was loading.....then nothing...If you haven't already guessed, yes I do use Windows Vista. I've un-installed Renegade and RenGuard twice now to try get it working but still nothing and every time I click the Renegade icon the message "Error Code 000005" appears. Please help and go easy, not very good with computer folders.

Thanks =)

You need to run both game.exe and game2.exe in admin mode.

Ok, I'm not sure if I know how to do that , if possible could you tell me how to get rid of RenGuard completely because I have used the un-install wizard for it and it still seems to be there.

Thanks =)

Just run game2.exe

I'm guessing you're using a shortcut from your desktop or where ever. Right click on it -> properties and in the target box there's the target of the shortcut, which should be "blaablaa\Renegade\Game.exe", simply add a 2 before the .exe, so it looks like this "blaablaa\Renegade\Game2.exe"

Then run the shortcut.

I tried C:\Westwood\Renegade\game2.exe and a message like this come up The procedure entry point ?Detect_Bandwidth@@YAKKKHAAHAAKKPAUtBandtestSettingsStruct@@PAD>@Z could not be located in the dynamic link library BandTest.dll.

Don't have a clue why it came up ...

Yay!

Place the attatched file into C:\westwood\renegade\

File Attachments

1) [BandTest.dll](#), downloaded 128 times

File already exists, do you want to replace it?

You did it in "Start in" rather than "Target" didn't you?

I added game2 to Target and it didn't work and when I try in Start it says "it is not valid".

Here's a simpler way: Go to C:\Westwood\Renegade\ find game2.exe and go to Send to: Select "desktop(create shortcut)", also I think you missed the other thing you have to do: Right Click the shortcut you currently have or the one you created following the steps above > Properties > Compatibility Tab > Check "Run this program in compatibility mode for:" > Select Windows XP(Service Pack 2), also make sure you run in admin mode still, sometimes it will work without admin mode(like it does for me most of the time).

If this does not work I'm sure we can come up with another solution.

You're welcome.

(Damn, what was I thinking, normally I pre-empt MS' message boxes...)
