Hey, here's my rotating weaponlist(man I am getting tired of typing that word). If you just want to use it, you can extract the zip file into your ren folder. I recommend making a backup of your shaders.dll and hud.ini files if you have them. ^^

Video: http://www.youtube.com/watch?v=rAshl_nGUsE
Screenshot: here

source has been also included, I just included the 4 files I modified and the rest is just the standard scripts 3.4.4 source files.

Some things also added in this shaders.dll - support for alpha(0-255) for colors used in HUD.ini, just use the keyword Alpha when declaring Red,Green,Blue, there's an example in my .ini; HUD disappears when you use the HUD command or are dead. I also added support for vertical healthbars in there, that's not the point of this release though. I do realize that there are bugs in the shaderhud.cpp that still need to be fixed from the original, I'll fix those as soon as I can.

I hope that I got everything ok, and hope you enjoy this. Please send any questions or comments, and if you have any problems with this, please be as descriptive as possible so that I can easily solve them.

Tunaman cheats.

But also, fucking awesome release man. Awesome feature, and not only that, source to go along with it.

Found a bug. It will crash a LAN game. It only works online

EDIT: I failed not Tuna
Corrupted test map in the map listing >.<

[View Forum Message](#) <> [Reply to Message](#)

Thanks guys. ^^

And Omar, that's really strange, I did most of my testing in LAN games, and only a few times online. Were you using another HUD by chance with it or just this? Its very possible I messed something up. :<

Edit: seems like it was a corrupted map

Edit: I also found out that it really emphasizes the lag you have... I wonder if I can make a way to fix it.

3.4.4 in general always crashes my LAN servers. [/offtopic]

I think it looks excellent. Also you released it for general use and even gave the source code. As reborn said, hats off to you, good sir.

Very nice work Tuna! Thank you for releasing this nice piece of work. Would it be hard to get this to work with a custom hud? I like it the way it is, but a few people have asked if its possible to get it to work with a custom hud. Again thank you very much for the release man!

I cant change the weapon list x y positions for some reason. I change the values of WeaponListXPos and WeaponListYPos but the weapon list did not move. WeaponListXCentered and WeaponListYCentered are turned off.

Hey Blacky, I checked and it seems everything was OK with changing the X and Y positions for me. I did notice a bug with WeaponListYCentered, and fixed it. I will upload a new copy that fixes this.

Sorry for the slow reply again, I think you know why I have been slow.

[View Forum Message](#) <> [Reply to Message](#)

Well, Tunaman found a mistake in his source code.

```

if(WeaponListXCentered)
{
    WeaponListXPos += ScreenResolution->Right/2;
}
else if(WeaponListXPos < 0)
{
    WeaponListXPos += ScreenResolution->Right;
}
if(WeaponListYCentered)
{
    WeaponListYPos += ScreenResolution->Right/2;
}
else if(WeaponListYPos < 0)
{
    WeaponListYPos += ScreenResolution->Right;
}

```

should be changed to:

```

if(WeaponListXCentered)
{
    WeaponListXPos += ScreenResolution->Right/2;
}
else if(WeaponListXPos < 0)
{
    WeaponListXPos += ScreenResolution->Right;
}
if(WeaponListYCentered)
{
    WeaponListYPos += ScreenResolution->Bottom/2;
}
else if(WeaponListYPos < 0)
{
    WeaponListYPos += ScreenResolution->Bottom;
}

```

And in the HUD.ini add :

WeaponListXP=0
WeaponListYP=0
WeaponListDistance=250

[View Forum Message](#) <> [Reply to Message](#)

I'm not referencing "WeaponListXP" anywhere in my code, is that something you guys have changed? On mine it says(and works with) the exact string "WeaponListXPos".

Also you don't have to add those in hud.ini, those are the default values anyways. ^^

Tunaman wrote on Sun, 24 January 2010 18:52 I'm not referencing "WeaponListXP" anywhere in my code, is that something you guys have changed? On mine it says(and works with) the exact string "WeaponListXPos".

Also you don't have to add those in hud.ini, those are the default values anyways. ^^

It gets WeaponListXP and WeaponListYP from the ini file.

```
WeaponListXPos = hudini->Get_Float("General","WeaponListXP",0);  
WeaponListYPos = hudini->Get_Float("General","WeaponListYP",0);
```

Lol at Tunaman for posting at the same time XD

Is there anyway that anyone can describe to a complete n00b & virtually computer illiterate person (Me) of how & where to put what files & what files to remove in order for this to work properly?

Does it work in cooperation with any HUDs w/o interference or error?

Subject: Re: [HUD] Rotating Weaponlist

[View Forum Message](#) <> [Reply to Message](#)

I think you better can wait until Tunaman or I release a HUD with this feature because its complicated.

Bump:

I assume this doesn't work with Scripts 4.0?

It would be awesome if it could be edited to work, as its a cool initiative.

Doubtful. This was no doubt a modification of the then open source shaders.dll, which is with 4.0 closed source. Jonwil or the like would be able to answer this better, however.
