Hello, would just like to share that TSO (TeamSpeak Overlay) is not compitable with TT 4.0 beta 3,

its causing renegade to output error Internal Error when trying to start the game.

Why? I don't know.

Hope this helps out!

Well i get that error every couple of days during a game but it is never a problem and i can easily reconnect to the servers through direct connect (ren ip) or westwood game listings off my disk.

It should just be a game crash and not a problem.

Sorry if its my fault i gave you that overlay download.

I didn't know that it was causing the game crash.

I just figured it was 4.0 itself or something because my game always crashes before 4.0 and after i got it

Please post any crashdumps in My Documents/Renegade/Client/debug/ so that we can debug the issue.

I helped debug this earlier and the crash-dump I received was a failure in the direct3d dlls at the time of device creation. Best guess based on what I saw is that it is some sort of issue with the way the team-speak overlay does things (similar to issues we have had in the past with overlays like x-fire)

Saberhawk might be able to tell more from the dump I have but I doubt it.

Just an FYI: if you're referring to the built-in teamspeak overlay, it works fine for me on 4.0. So I dunno what the deal there is.

Well using teamspeak2 for n00bstories server which is what T0mbie is using does not have a built in overlay such as TS3 does.

He is running TINT Standard Edition

If it works for TS 3, then I don't think it's worth the trouble trying to fix it for TS 2.

StealthEye wrote on Sat, 03 March 2012 08:21If it works for TS 3, then I don't think it's worth the trouble trying to fix it for TS 2.

He wants to play in n00bstories therefore he will need some form of voice overlay for the server if he wants.

---

He has no need for TS3 unless he goes to another server

Go bug them to update to TS3 instead of bugging the TT people to make 4.0 compatible with old software

oh how I miss TS2 with its shitty audio codecs. That made everyone sound like a girl and don't forget the delay.

People still use ts2? wtf..

Ts3 takes like 5 minutes to set up..tell noobstories to stop being lazy

I think crimsons team stacking thing only works with ts2, hence no ts3.

ehhh wrote on Sun, 04 March 2012 11:10I think crimsons team stacking thing only works with ts2, hence no ts3.

Probably true, but there's already been scripts made to work with TS3 that provide that same feature.

Not my place to tell anyone anything on n00bstories  
We are old school, we don't need your fancy technology to have a good time
