Hi Guys,

I know renguard blocks .ini files will it be possible for servers to still host sniper only servers using this mod. I hope so as this is one of if not the most effective mods I have seen at preventing n00bs fucking up a sniper only game.

RenGuard does not block anything installed on the server, only files installed on the client. And if the mod in question does require client-side changes, we can always add them to the "approved" list.

and this "approved" list can i find that somewhere ?

i would like to see what i can use of my skins...

I have the Sniper Server mod installed on my client and it doesn't block it in any way.
