Subject: What quality setting do you all use?

Lowest setting. With a Voodoo3 16MB I get from 20 to 35 FPS. I like the game to be as smooth as possible. I allready have trouble with FPS going in the toilet when a lot is going on around me. Don't care about bullet holes, extra beam effects, special textures, MCT glass breaking, and all that stuff. I've played that way before and it is nice but not needed. When I can get a newer video card I will bump it up to better but for now I'm happy with what I have.
