AircraftkillerI believe they changed their game in mid-development and turned it into Red Alert 2. I can't show you the leaked screenshots I have (Stuff that would knock your socks off.), but I can tell you a lot of it was beyond amazing - you can tell it was Red Alert 2 because of what they were slowly implementing into the test maps; Soviet Barracks, destruction animations for it, Battle Bunkers, and other assorted items.

As far as I recall, they only got the Soviet Barracks and the Battle Bunker done. The rest wasn't finished in time. Some vehicles were created as well - all of this was zipped up by Greg Hjelstrom and put on the Westwood FTP in the RENEGADEMODART.zip file.

Man sounds like they had it going shame they canceled it :'(...

Hmm don't suppose that file is there for us *goes to look* ...

EDIT: w00t it is there gonna download and see whats in it.
