flyingfoxCan we see some shots of these weapons and vehicles in the game?

Maybe it's just me, but none of this seems to look as good in-game

That was your 666th post, evil lies!

They can look like that ingame, if you have a anything higher than a 64mb gfx card with detail on full. Not a lot of people keep detail on full unless they have something like a radeon 9800....so that's why they seem less detailed. They still look 100x better than the renegade weapons though. Go play .9925 now and look at the difference between the details on our weapons and their weapons in 3rd person :S
