RenxNot a lot of people keep detail on full unless they have something like a radeon 9800....

Eh? You don't need a very high-end card to run Renegade at max detail. I have a Geforce FX 5600 with Renegade at max detail and at 1024x768 resolution, and I get between 50 - 100 fps in RenAlert. On my old computer I had a 16mb card and still had Renegade at max detail, with 20 fps.
