This is just a possible suggestion to help make RenGuard and Blaze Regulator (BR.net) work together.

Adjust the coding and config file of RenGuard from:

# Path to svrcfg_cnc.ini
FDSConfigFile = C:\Westwood\RenegadeFDS\Server\Data\svrcfg_cnc.ini

# Path to Main Server Dir, do not forget trailing slash.
FDSLogFilePath = C:\Westwood\RenegadeFDS\Server\Data\Logs

To:

# Path to svrcfg_cnc.ini
FDSConfigFile = C:\Westwood\RenegadeFDS\Server\Data\svrcfg_cnc.ini

# Path to Main Server Dir, do not forget trailing slash.
FDSMainAppFilePath = C:\Westwood\RenegadeFDS\Server\

# Path to Log Dir, do not forget trailing slash.
FDSLogFilePath = C:\Program Files\BlazeRegulator .NET\Logs

This would allow RenGuard to locate the main Server directory, and look else where for the log files. Let me know if this helps and/or if someone gets those 2 working via other means.
