I'm going for the X800 XT myself, mainly because of nvidia's poor performance compared to ATi in their FX series of cards. I have an FX 5200 at the moment, and my old GeForce 4 MX 440 SE on my older computer was better than this one in renegade. Also, I dont like the idea of the 6800 using a lot of power, and looking at benchmarks, ATi's X800 series are better at the moment, although future games may bring the 6800's up a bit. IMO
