Planned Features

Since of CP1, the LFDS supports IPs I plan to add IP banning to brenbot. But I dont know if it will make it into brenbot 1.36.

Comments?

Damn this feature = more important than any other feature man...
ohh ya, what about the partial renguard enforment thing?
Finnally, make sure you take into account gamespy with [] chars in thier names as their votes are counted again & again.

LAST, but irc support, make it so that the bot doesn't display more than 3 lines every 10 seconds.... it gets kicked for spamming on !pi and stuff... if you can... I know you said something about a perl module or something not really sure, but not every irc server is running unrealircd..:/
