Quote:If your son spends more than thirty minutes each day on the computer, he may be using it to DOS other peoples sites. DOSing involves gaining access to the "command prompt" on other people's machines, and using it to tie up vital internet services. This can take up to eight hours. If your son is doing this, he is breaking the law, and you should stop him immediately. The safest policy is to limit your children's access to the computer to a maximum of forty-five minutes each day.

Quote:Quake is an online virtual reality used by hackers. It is a popular meeting place and training ground, where they discuss hacking and train in the use of various firearms. Many hackers develop anti-social tendencies due to the use of this virtual world, and it may cause erratic behaviour at home and at school.

Oh nos I play quake, I must be a 1337 hax0r..
