Ok Guys I have had some success with the latest download from  
<http://www.beaconpedestal.com/renguardssc>  
I have it running on Windows XP Pro 2 gb ram dual 1.2 Athlons, BR .Net, IRC, etc etc.  
Here is what I did:  
I uninstalled the SSC  
Reset computer.  
Turned off everything except antivirus.  
Then I installed the SSC  
reset computer  
configured SSC  
started FDS  
turned Firewall off  
I went online and it connected fine no problems.  
started BR.net  
then restored firewall allowing the SSC  
That was almost 2 hours ago and it is still working fine.  
Seems to work great it kicks people without Rg very quickly!  
Good Luck  
Ohno
