smwScottNot really, it's downright silly to continue work on a mod for Renegade unless it's right on the verge of being released. Ren Alert, the most popular mod for Renegade, isn't getting nearly as many players.... -snip-.

My point exactly. The Source allows to do things that that was not possible do in Renegade or they were in very limited form. Like for example, a true night vision/IR goggles mode can be done with Source while Renegade could only make the screen green with an alpha channel.
