Ok, heres a basic page for you, name it index.php

```
<?

//the password
$the_pass = "pass123";

if ($action == "login") {
   if ($_POST['pass'] == $the_pass) {

   //set them as logged in
   $_SESSION['pass'] = $the_pass;

   }else{

   echo "wrong password, please hit back";

   }

}else{

   //checks if you have typed in the pass
   if ($_SESSION['pass'] == $the_pass) {

   //your page content goes here
   echo "
   <html>
   <head>
   <title>my page - members section</title>
   </head>
   <body>
    welocme to members section
    </body>
   </html>
   ";

   }else{

   //login page goes here
   echo "
   <html>
   <head>
   <title>my page - login</title>
```

```
</head>
<body>
<form action='index.php?action=login' method='post'>
Username:<br>
<input type='text' name='pass'>
<p></p>
<input type='submit' name='submit' value='Login'>
</form>
</body>
</html>
";
}

}

?>
```

I just wrote this from scratch just now, so they're might be errors, basicly this is just a quick script that checks if the pass session is registered and if it is, does the pass match the supplied pass.

If you want something more secure i suggest mySQL, sessions and MD5 encryption.

If you would like me to code you a proper login and user management system i have low prices.

Hope this helps
