Subject: Multiple Servers?

Hey I am total noob boy here. I got a nice server (runs windows 2003 server edition)and connection (about 4mbs)and currently run a ren game server for about 40 people in GSA with FDS and support it with brenbot 1.35. Does anyone know how to run another server from the same box? I tried the slave server settings but I am thinking this is for WOL only. I tired to install another instance of FDS but I think that is wrong as well, only because I tried that when it was setup as WOLSPY server and it started getting errors from both fds running. I don't care about the Wolspy but would like to get 2 servers running in GSA from 1 box with BRenbot. Can anyone offer a hint or maybe even a complete walk-thru lol. Thanx you guys rule.
