I think everyone gets that crash to desktop every once in a while, even me. I'm playing a game and "The End" I see a desktop   game didn't even minimize......nothing, just stopped.

I just restart Renegade & game on

Try stopping any additional programs running in the background of your computer that you don't want running when it boots - Run/msconfig/startup

If you crash more frequently like: 2 or 3 times a week then yea, you might want to uninstall Renegade completely (even delete the folder) Save your SP save game points/extra maps if ya want first and then do a fresh install.
