hey, i have an idea, you don't have to use it, but at least read my idea:

Have an keyword response type thing. Where the NR user can set keywords and when those key words are mentioned in the server NR sends out a message that the NR user typed in to correspond with a certain keyword. example:

In a "keyword" field in NR i type in "!punch <name2>" and then next to it is a response field that i put in "<name> puches <name2> in the face."

so if i type "!punch bubba" in f2 chat NR sends out a response saying "DytHlt puches bubba in the face."

Kind of like a custom command thing, and have certain fields users can enter, like <name> <recs> <cp1> that kind of thing.

You dont have to use this idea, i just always wanted this kind of thing in a regulator, you could even finish up version 0.1.0 and then maybe put it in 0.1.5 or something.
