Ok try this its a long shot but it could get u some where

me bein the PC Nerd that i am i could solve your problem

try this:

Click Start and point to RUN
In the RUN dialog type CMD, Press ENTER (Or ok button)

!!! WITHOUT BRENBOT RUNNING !!! type in netstat -an, press Enter

Look for the port 11004 either UDP or TCP
If its there then some other software is usin the port, thus brenbot cannot open it... try closin some
programs that use the internet untill the port is no longer on the netstat list...

If its not there, then try ending some net-stat (or limiter) programs...

Another fine and totally amazing post by me lol
