Well I use XP also and IE and the patch hasn't done anything at all, its possible that you just got some nasty stuff around the same time, and i don't see how the the patch could possibly affect IE.

Do a good search for spybot search and destroy and ad-aware, those solve spywhare/adware and pretty much any other problems.

If you can't take it get firefox, its better but I prefer IE, dono why, just don't have any problems myself.
