I recently formatted my comp and reisntalled renegade.

It took me 30 mins to work out how tp install it because no text appeared on the installation.

Now the game is installed, when I connect to WOL no servers are shown.

I think it has something to do with the text not being shown in the installation.

I have installed renegade 1.037 patch.

This has happened to me before but I can't remember how I fixed it.

Any help is welcome. Thanks
