sniper12345icedog90Tooncy's screenshots show true sharpness in HL2. The rest are blurry and aren't on high.

Maybe he tuned down the resolution when he uploaded them.

For some reason, the top one came out at a weird resolution. I took both of those screens while running on DX9 High. I had AA at 6x or 4x, same for AF, and the resolution I was running was 1024x768. It didn't put the blur filter on.
