Thanks to the people(hope more than one) who are giving their time for reading this!

I launched Renegade after a pause of 10 weeks.
So I was happy and looking forward to play it again, as you can imagine.

The problem: When I connected to my favourite server, a message occured out of the nowhere, it says that I will be kicked because of not using Renguard.
(it was a server found via "all seeing eye")

So I reinstalled Renegade, Patch 1.37 and Renguard 1.03.
And it still does not work.
Tried it on WOL also, but it seems to be down,finally!

Any idea? Maybe it is a registry thing,because I tested the CP1 Beta, but I don't know how to fix it.

Ps: The game works on "no Renguard servers", but to me, it is no fun.

Farewell and thanks for ANY help...

noodles

edit: now the server (and not only one) kicks me right after cheching the bandwith....
