There is no lockout code in place in SSCP1 1.3, and you are not required to use brenbot. If it crashes for you, maybe you got the configuration messed up. Check the server2.ini and take a look at the comments.

The source code for SSAOW is provided within.

So, do your research better next time. I'm tired of hearing accusations. This was not tested with BR.net and thus I don't know if it works, or not.
