Even with my old GeForce 2 MX 400 I got 30 fps in a 32 player game. I'm sure you must have something setup wrong. My clan friend has a GeForce Ti 500 and he gets 50+ fps online so you must be doing something wrong. I know this may sound dumb but are you sure your monitor is plugged into your GeForce 3 and not some onboard video socket? Anyway I would say that you have something setup wrong.
