I have seen such a "RG-bypass" few days ago. I was on the server "n00bstories.com", the map was Mesa and a player had about 57 Kills and 5 Deaths as a Deadeye (we both were GDI). A few days later he was on DT-Marathon AOW on WOL Euro with a similar Nick....I think it was the same guy and he uses BH. The 2 WOL-Nicks you all should ban (after a test, because he was detected with RG) are=

Ramrod_AI (on the n00bstories server) & Ramlod_AI (on the DT marathon AOW server)

He was way too good, but after he was checked with RG, the most players believed in the Serversided message... if one of you see him ingame, follow him and try to get the reason of his unbelievable K/D Ratio please. I didn´t get much of his action while viewing the Gamescore, but every shot was a Headshot, as the enemy complained...

I know DTbolitie is one of the Admins from DT, but I don´t know exactly at the moment who it is at n00bstories, so please contact them to watch the logfiles.

This happened: Sunday 26th February 2005 06:00-06:30 AM European (German) Time, so I must correct this to= Saturday 25th February 2005 Evening in your Timezone. Due to the fact that I don´t know the correct timezone n00bstories is at, you must go 6-8 hours earlier in the log I guess.

THX for reading IMHO it´s important.
