kind of. Remember that the TD size is not your image size. That changes the size of the table.
When your creating a website like that try to create images for 800X600 monitors(still VERY
common). Then with your tables if someone is using a different sized monitor it will just reformat
the image to fit their screen.

Please tell me you know how to work out percentages though. Like if your menu bar is %20 then
your sites main content must be %80.
