Everytime i try to launch renguard it comes up like it normally does but the window is blank and the mouse is "thinking", when i try to close it it says "End none responsive program Renguard?" (plus some other stuff) and i say end now and it closes. What is wrong?

Oh and i tried Reinstalling renguard and that didn't work then when i downloaded core patch one it said

deleting old Always.dat

deleting german always.dat

deleting french always.dat

renaming scriptsstx.dbs (i think its .dbs) to scripts.dbs

What is going on? thnx to any1 who can help me...
