Triforcel'm wanting to upgrade to XP soon, but which version is better for someone who only uses their computer to play games & RenX with, Home or Pro? Although either one would be better than the hunk of junk called ME thats running now :twisted: ! Me and ME don't get along good much anymore...

Im useing WinXP Corp (its about the same as Pro, but gives me like 20 differ users and computers it can be installed on) Home is good for memory issues and screens savers and what not, I think Pro is better myself.. (have home at home)(pro at college)(Crop at work)
