Subject: Choosing which monitor to play on; dual-monitor vid card
Posted by Kanezor on Sun, 08 May 2005 07:36:39 GMT

I recently added a second monitor to my GeForce FX5300 PCI-X, and went to select which monitor to play on in Renegade. Since my second monitor's maximum resolution is the same resolution I play Renegade at, I figured I'd play Renegade on that monitor. However, when I opened up Renegade Config, I didn't see anywhere to specify which monitor to play on. Instead, I think Renegade Config only allows to specify which video card to play on. Is this true? Is there any way around it in either case?
