I used the scripts.dll and bhs.dll 2.1.2 from SF and my game crashed several times. So I did an uninstall and reinstalled game/1.037/djlaptop_cd_crack/rengaurd/cp1 and it worked fine. Thinking I made a mistake I used the utility provided under this same topic to install 2.1.2 and it crashed. I did the aforementioned uninstall reinstall and used the 2.1.1 utility to see if it crashed, and it did crash. I waited around for an answer and saw no progress so I decided to try it again. This time I only changed the scripts and bhs from 2.1.2 with the ones in the renegade file, and it crashed. I took the new scripts back out put the old one back in, and it crashed. I put the new scripts back in and took the old one out, then took the new bhs out and put the old one back in and it hasn't crashed so far. Damn, now I'm confused. So in summery it is game/1.037/djlaptop_cd_crack/rengaurd/cp1/scripts 2.1.2/bhs.dll (I asume this is from cp1) 60.5 KB (61,952 bytes)
I really like the client log that bhs has so any help would be appreciated.

BTW I have this I have this from 1 of my logs that says a mod is using big head. Is this true or is it a smart ass comment from BRenBot?
