I would SERIOUSLY suggest you try and find a cheap or even used Nvidia 6800 card, I don't know how much they are, but ATI cards might out preform them but they simply are nowhere as stable most of the time. I used to have a 9800 XT that suffered constant VPU crashes and a friend has a 9800 that does it, also I used to have a 9600 that clashed with TWO different motherboards that said they supported ATI technology. =/
