SK had made a little app that did that (looked in the registry and made a list)... but it always set mine to "crimsson" and for some reason mac makes things case-sensitive so it would say I wasn't on RenGuard because I'm "Crimsson" in WOL. I'll check this out.

[Edit: Never mind -- you're going to need to link to a copy that doesn't have a link to a cheat site in the README. The link is removed from your post.]
