RMWHunterDoes anyone know how to change ts's adress? like the ip into a name

ex. Ts.Rmw.com, or something?

1) You need to own the domain you wish to put your teamspeak on.
2) Create an ANAME entry for ts.yourdomain.com, with the real IP address of your teamspeak server.
3) Wait up to a few days for your domain to refresh (95% of the time, however, your results will be near-instant)
