** Do NOT use HTML code on the forums, thank you **

dude, thats some hot shit right there. I didn't think iframes worked on this forum.

anyway, what you should see there is your renegade folder. if there's a file there called game2.exe, check its size. if it's about 300 to 400 kb big, delete it. do NOT delete game.exe. once you deleted it, check for files called renguard.dll and bhs.dll. if you find them, delete them too.

then, try to reinstall renguard.

edit: ok I'd like to ask. does that iframe work on your (the viewer's) computer? it doesn't seem to be working here, but the website I got the code from won't have it work either, and it usually works.
