Firstly, this is in the wrong sub-forum.
Secondly, if you get the Modify/Repair/Uninstall selection screen when trying to install RenGuard instead of a language selection screen, that means that somewhere in your system's registry, you already have a copy of RenGuard installed. If you need to uninstall RenGuard, do so through that program. Do not manually modify your existing installation unless you are completely sure of what you are doing. After uninstalling RenGuard, you'll be able to reinstall it. Simple as that.
