Hey, how much are you exactly willing to offer? The 3000+ (Socket 754 AKA Athlon 64 mod) Usually retails for 100-135 (approx.) and it offers much better performance than Intel's affordable processor line (Celeron, har).

I'll use it for a short period of time (I'll order the Turion from Ewiz (not many websites (that ship to Canada) have it) soon), during those two days the PC will play a few games and be benchmarked so I can see the real difference between the Turion and the Sempron.

Submit your offer, and I'll send you a Paypal URL.
