I need some help with my ren server.
Im running ren FDS on windows , im in a network at home.
I have a router who is constantly blocking ppl who want to join
Does anyone know how do stop this ?

i heard someone say open ports on your router.
But what ports do i need to open ? , any specific ones ?

If u know anything about this plz post

Ty -DarkWayne-

You can set the port you want to have in the server.ini file.
But there are three different ports:

normal port, Gamespy port and Gamespyquery port

I have a router too and have no problems with running a server.
Just open these 3 ports and it should work
