TEKNIK wrote on Mon, 15 August 2005 20:04Just a question. How is it that your ignore list works?
My ignore list, or the ignore list? Im guessing its the ignore list, so ill explain.
When you put someone on ignore from theyre post, theyre profile, or any other way you can, all of their messages look like, basically Win-Amp in its miniature form. The Modern Win-Amp skin, anyway. Within that small thing, is a few options, as follows: "Reveal message," "reveal all messages by USER," and "stop ignoring this user." You can remove people from your ignore list by going to your Ignore List in your User Control Panel area.
Theres also the opposite, which is the Friends List. Im not to well versed on it, so i cant explain that.
All the ignore feature really does, is allow you to skip by someones post that you dont like. Like nopic, for instance.
