06:17Create a file called ssc_ignore.txt inside your BRenBot folder, then enter the name your
cousin is going to use when in your server to it, then either rehash brenbot, or restart it.
I personally don't like this feature, it means every server owner can cheat...
It's their server, they pay the bill, they do the work. They have every right to cheat on it if they
want. If it's a clan server and they chose to do that (xil *cough* xil) then it's their server and they
can. Mean while all the smart poeple play lagit servers that don't suck.
