mac wrote on Sun, 25 September 2005 13:43We have a md5 hash of your serial.. not possible to calculate it back, since it is a hash

True, but in theory, wouldn't it just be easier to make hashes of serials and compare them?

I mean a serial has a set number of characters, and a limit to what those characters can be, so generating a list of all hashes for all possible codes can't be very hard. (Just time consuming)
