DrasticDRIN close combat when reloading, try to get as close to the ememy as you can and jumop around him. Once your are done reloading slowly go back and try to shoot him.

good tip DR. Other ones, if you snipeing at far.. never stay still, chances all if you see them, they see you.. always remember duckin and save ur life. While jumping and trying to get HS.. lead your target... usally takes me 2 or 3 shots before a hit.. some only one. If you suck at close combat with sniper rifle... stay away lol.. easier said then done, if your being rushed.. run back to base and snipe from there. And remember if you cant hit a head, look for feet, gun, hand or knee (still can cause a kill).. If you want.. this on the weekends... look for me and we can do a one on one match? or you can come into one of the sniper servers with me. Add archcasp to your WOL buddy list and ill be on sometime friday and til monday noon.
