P.S. If you really want to edit the radio commands on your side only, this is already possible by just dropping a .wav file in your data directory with the proper filename.

Well what I meant was the ability to create your own radio commands without having to run an extra application or use a preexisting command and just use your own sound file. So basically, it's what you are doing, but letting users create their own via an editor.

As I said, you can already do that, you can use any editor you want and create a radio command, and just save it as a particular filename for it to override the normal one. Of course you will be the only one able to hear it, but there's nothing we can do about that.
