That is extremely weird.

I've tried many differet combinations. Such as:

1-.9-.1

1-0.9-0.1

(1.0-0.9)-0.1

(1-0.9)-0.1

etc...

All of them come up $-2.77555756 \times 10^{-17}$. Now, $1.0-(0.9-0.1)$ turns out .2, which is correct.
