ok, its better if you put them in a new post or mention you edited it, for future reference

I have little experience with BlazeRegulator, I would suggest using BrenBot instead, but that's simply personal preference. Perhaps someone with more experience with BlazeRegulator will post something more helpful.

Check that the RemoteAdmin settings in the config files match, thats a common reason for commands not working. Also ensure in the fds server.ini you have set

AllowRemoteAdmin = true
