The RG client downloads a list of master servers from a remote server(s). If you have a firewall installed, there is a good chance that the first time you install RG it blocked that access. Most firewalls make a popup saying someting like "This program is grying to make a connection to somehost, allow Y/N". If you say "no" then it is blocked from then on, or sometimes people set their firewall to automatically and silently block such things.

So my advice is to check your firewall settings carefull. If you cannot figure it out, post back in this thread what firewall you have (including windows firewall), and we will see if we can figure it out.
